

Dairymaster

Explore your **career opportunities** with a forward thinking company dedicated to success...

A world leader in dairy equipment manufacturing...

Dairymaster, a world leader in dairy equipment manufacturing, operates from its Global Headquarters in Causeway, Co. Kerry, Ireland as well as operating offices in the UK and USA.

The Company was founded in 1968 and now has an estimated 70% market share of new and parlour upgrade installations in Ireland, plus an export market that spans up to 40 countries worldwide. Dairymaster has reached this position in the market because they offer their customers significant performance advantages due to our emphasis on research and development.

Welcome to Dairymaster... Global Headquarters

Global Headquarters - Kerry

Dairymaster operates from its head office in Causeway, County Kerry, Ireland.

Our Products

Dairymaster's objective is to make dairy farming more profitable, enjoyable and sustainable by applying advanced technologies. Dairymaster has a wide innovative product range including milking equipment, automatic scrapers, automatic feeders, milk cooling & heat detection plus much more!

The continued growth of the Dairymaster brand worldwide and the increased demand for Dairymaster equipment is due to its popularity with farmers all over the world, who value the high performance capabilities of the equipment and its innovative features. Over the past four decades, Dairymaster has researched all aspects of dairy farming and dairy herd management from its own in-house R&D department and has developed unique technologically advanced solutions aimed at making dairy farming more profitable by reducing long term costs and labour inputs. We vigorously test our products through scientific trials in order to achieve peak performance capabilities.

Research & Development

Dairymaster's world-wide success can be credited to the company's unfaltering commitment to ongoing research and development, superior product quality and performance and excellent customer service and support. Since its existence Dairymaster have focused heavily on research and development and as a result of this has developed unique technologically advanced solutions aimed at achieving the maximum performance from its products. For example:

- On average a Dairymaster parlour typically milks each cow 1 minute faster.
- In recent scientific trials the Dairymaster cluster yielded 5% more when compared to another commercially available cluster.
- Dairymaster milking equipment has been designed to have the lowest levels of liner slip, excellent milk out and lower shear forces on teats which results in improved udder health.
- Dairymaster pulsation mimics the natural way of milking as the vacuum profile of a Dairymaster milking unit is very similar to that of a calf suckling.
- Dairymaster milking systems have top performance when tested in accordance to the latest ISO International Standards for milking machines.

Dairymaster products operate effectively on farms with cow numbers ranging from 40 cows to 10,000 cows this is due to the modular format of Dairymaster's products. Many of the products operate effectively as stand alone products however all are capable of being upgraded and integrated into a fully computerised milking parlour with the capability of automatically monitoring the progress of each individual animals yield and the overall management of the farm.

Facilities & Training

Dairymaster's state-of-the-art Global Headquarters encompasses a three story office and laboratory with state of the art training and translation facilities plus research and development and testing laboratories.

Dairymaster hold regular training sessions at their Global Headquarters for both domestic and international distributors. This training covers all the latest technical advances and developments. There is also an ongoing internal training program for all staff to update skills and advance information transfer.

Producing 95% of parts in house... Dairymaster Departments

Perhaps uniquely for any manufacturing facility, Dairymaster actually produces almost 95% of all parts internally.

Dairymaster uses a combination of the skills to create the optimum product to give the greatest performance for the operator. This strict control of all stages of the production process is key to the company's commitment to ensuring the quality of the final product. The benefits of this are speedy development, ease of communication and comprehensive in-house knowledge of all aspects of the product.

This enables us to have full control of all aspects of development and production.

Dairymaster's aftercare service, on-going customer support and constant monitoring of product performance in the marketplace, has given the company a strong competitive edge. Dairymaster place a major emphasis on research and development and are known as innovators in the industry.
